INTRODUCTION

The Cryptocurrency universe new decentralized and innovative systems that will bring solutions to some of the most important issues in the world that is ahead of its time. The team behind the AnimeBNB wants to lead the way of the ecosystem and help bridge the power of crypto with the challenges of the decentralized financial system in the world today.

AnimeBNB is a Binance Smart Chain-based cryptocurrency one-of-a-kind rewards platform with maximum payouts through a gaming platform, where buyers and sellers meet to transact based on long-term speculative and value views.

AnimeBNB is based on Binance Smart Chain BSC(BEP20). This ecosystem is based upon automatic Rewards, LP Acquisition, Yield Farming. LP Acquisition is advantageous in cryptocurrency as it generates rewards by holding the coin and generates passive income. AnimeBNB also provides multifunction for user their users like a secure platform for ultra-fast transactions, lower fees than other coins, and a burning function. AnimeBNB IS an Eco-Friendly currency that does not want to damage the environment, so that's why it disabled the mining function, no one can mine AnimeBNB.

Every transaction in the AnimeBNB protocol leads to the automated creation of liquidity within Pancake Swap LP, which operates on the concept of automatic LP. AnimeBNB distribute RFI static benefits to holders through static reflection, resulting in continuous increase of their balance. Finally, AnimeBnb uses a manual burn approach, with burns managed by the team and promoted depending on performance. This is advantageous for long-term participants and helps to keep the community informed and rewarded

VISION

We aspire to put “cryptocurrency in every portfolio.” We envision a world where wealth-building strategies that were once only accessible to affluent individuals become available to everyone, transferring the power over our financial systems back to the people. AnimeBNB is going to create a revolutionary ecosystem to bring more people into digital assets, building a safe and secure platform that is positioned for global adoption with no limitations helping to earn a handsome passive income through staking, gaming, real-estate NFT passive income along with yield farming, as well as maintaining investors privacy, security, and autonomy. We strive to create an ecosystem based on sound monetary policies, with a sound and solid decentralized foundation.

ECOSYSTEM

AnimeBNB is a decentralized finance (Defi) gaming token on the Binance with three functions that take place during each trade: Reflection, Liquidity Pool (LP) Acquisition and rewards payout. These functions work together to overcome messy problems caused by farming rewards, and price fluctuations. That it is nearing the Binance user ceiling and its growth is unsustainable. We believe that AnimeBNB will see exponential growth, just as BNB has, and AnimeBNB coin hopes to generate immense value for our community by taking advantage of this opportunity.

REFLECTION

Also known as static rewards, aims to prevent price collapses and valuation bubble busts caused by liquidity provider (LP) farming rewards. Manual burns assist in rewarding and informing the community. The manual burn's circumstances and quantities are publicized and monitored. During larger collapses, this automatic liquidity pool offers stability. When whales sell big positions, automatic LP keeps the price from fluctuating too much, which allows our team to do manual buybacks with marketing rewards creating stable price action.

WHY STATIC?

The reflected method successfully enables token holders to hold their coins depending on percentages completed and total coins owned by owners. Static rewards play an important part in addressing a variety of issues to provide investors with earnings depending on the number of coins exchanged in the market. This method is designed to satisfy early adopters who want to sell their tokens after earning high APYs. This method attempts to relieve some of the negative sell pressure on the coins that have been created by early adopters selling their tokens after harvesting insanely high APYs. Second, the reflecting mechanism encourages holders to keep their coins to earn greater kickbacks, which are calculated as a proportion of the total tokens owned by the owner.

BURNING

Sometimes burns are important, and sometimes they aren't. In the early days, a continuous burn on a single protocol may be convenient, but it implies the burn cannot be limited or regulated in any manner. Burns that are managed by the team and elevated based on accomplishments assist to keep the community informed and rewarded. The conditions and proportions of the automatic burn may be marketed and monitored. AnimeBNB intends to execute a long-term burn strategy that is both helpful and gratifying for people who participate. Furthermore, manual burns assist in rewarding and informing the community. The manual burn's circumstances and quantities are publicized and monitored. Burns will be shown on our website readout, allowing for more transparency in determining the current circulating supply at any one moment

LIQUIDITY

Liquidity providers receive LP coins for providing liquidity. Users pay fees for trading on pancake swap, which is allocated to liquidity providers depending on the quantity of LP coins or percent share they own in the pool. LP may suffer a temporary loss as a result of providing liquidity, and they may not get the same number of coins back. The AnimeBNB coin protocol guarantees that coin holders' assets are immediately taken and locked for liquidity. The primary goal is to keep the holder informed about the AnimeBNB coin performance by avoiding whale dips when they are used in a mass trade-off/ AnimeBNB coin secret is Automatic LP. We have a function that serves as a dual benefit implementation for holders. To begin, the contract collects coins from both sellers and purchasers and adds them to the LP, establishing a stable price floor. Second, the penalty serves as an arbitrage-resistant mechanism, ensuring that the volume of AnimeBNB remains safe as a reward for the holders. In principle, the additional LP provides stability by adding the tax to the coin's total liquidity, thus raising the coin's overall LP and maintaining the coin's price floor. This differs from another reflection coin burn functions, which benefits only in the near term from the given supply decrease. The price stability of the AnimeBNB LP mimics this function, with the added advantage of a firm price floor and cushion for holders. The aim is to avoid bigger drops in the price when whales opt to sell their coins later in the game, which prevents the price from changing as much as it would if the automated LP mechanism wasn't in place. All of this is in an attempt to address some of the issues with the existing Defi reflection coins. For these reasons, we are sure that system and protocol will triumph over outdated reflection tokens are sure that our system and protocol will triumph over outdated reflection coins

STAKING

AnimeBNB works on the Binance platform, which is eco-friendly, working on a proof of stake. In addition to being the largest crypto exchange by trading volume, Binance offers exemplary staking services. Binance staking ensures users' funds are safe by leveraging effective security measures and providing Secure Asset Fund for Users (SAFU). Our staking method at the time of writing is arguably one of the safest and most eco-friendly methods (for cryptocurrency) to earn passive income.

The platform stores all staked coins using a secure wallet and a double-checking system. As more and more people, including institutional investors, realize the crypto market's lucrativeness, crypto staking is fast becoming a trend of earning passive income by simply holding or locking funds in a wallet. Since staking cryptos requires some technical crypto know-how and damming requirements, AnimeBNB staking platforms come in handy to allow investors, even those without technical knowledge of cryptos, to stake AnimeBNB coins and earn rewards. For only a percentage of your staking rewards, the staking platform lends you their technical expertise and validates stakes on your behalf, enabling you to earn passive income. The substantial growth of crypto staking has seen a boom in staking platforms allowing investors to earn staking rewards seamlessly. If you're thinking of making passive income through staking. AnimeBNB is a fantastic option and will be available Q! 2022..

ANIMEBNB CHARITY

AnimeBNB is a ground breaking new system designed to revolutionize the DeFi space. One of our missions is charitable giving, we encourage our holders to donate to our charity wallet to fulfill our ongoing mission to assist charitable projects and organizations as well as linked charity organization.

Our vision is to donate both token and fiat for charity to provide an ongoing assistance for charitable projects deemed appropriate for support by our community as well as charitable projects picked by our team. We are also working in collaboration with your votes to decide the new charities in need to donate to, as we want our contributions to be a reflection of what's important to you, our community.

By using the blockchain system to donate to charities, our system provides complete transparency toward charitable donations and reflects our community voices. Donations made in fiat will be updated by team members in the appropriate sections for our community to be made aware. We aim to bring significantly more money and donor engagement to all charitable foundations we work with. One charity we at AnimeBNB are aiming to help is Sick Kids Foundation.

Frequently Asked Questions

Where do the BNB rewards come from?

- 10% BNB automatically sent to anyone holding 10k+ tokens
- 13% transaction tax.
- 10% to holders on the buy
- 3% to LP
- 10% of the BNB used to purchase AnimeBNB is held in a pool. Once the pool reaches a certain threshold, the BNB is distributed to AnimeBNB token holders proportional to their wallet's share of the supply each hour to minimize gas fees and increase investors profits.

How do I claim rewards?

- BNB will be auto deposited to your BSC wallet.

Can I help make this token grow?

You can help the process! Here's how:

- Get involved in Reddit threads
- Upvote and comment posts
- Get involved on Twitter! We have a good following before launch!
- Spread it to influencers!
- Participate in the community!
- Join us on our Telegram channel! Facebook, Twitter, Instagram, Discord Tik Tok
- Chat with us and feel free to give us suggestions on how we can grow.

How do I know this is not a rug pull?

- There are no Dev Wallets. Marketing wallet is locked for 6 months.
- The lock can be extended, but not removed or changed to an earlier date.
- Each member of the team is full doxed
- Liquidity will be locked for 6 months with option to extend before expiring
- Marketing wallet will claim BNB rewards and these will be used for influencers, major exchange listing, web development, and game development.
- We are not renouncing ownership of the contract. Ownership needs to be retained in order to adjust the BNB distribution intervals and needed to expand our NFT game platform ontract.
- While contract has the `_mint` function that can only be used once, when the contract was deployed, no other method of minting more tokens is possible.
- By locking away our LP tokens, we are essentially locking away our right to remove liquidity and stifle trade. Since the liquidity is locked for a min of 6 months, there is no way for the developers to rug pull the holder
